

Step by step plan fingerprint jewellery

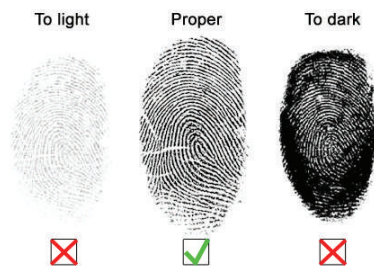

Print this PDF on white paper and follow the next steps.

- Make sure that your fingers are dry;
- Put this paper on the edge of a table;
- Use fingerprint ink or a stamp pad;
- Create a flat print of your finger.

Be aware: Don't roll your finger, push normally on the paper!
Below you see how a proper print looks like:

Create a minimum of 4 fingerprints (1 per box). Our designers will choose the best fingerprint of the four. Then scan the design (our preference) or take a picture of it.

Be aware: If you are making a photo of the design, be sure to make the photo directly from above. Furthermore avoid shadows or other shapes that are visible within the design.

Upload the scan or photo of your design on our website and complete the order.

Your fingerprints
